**Investment Strategy of the Scheme**

The scheme has a dual objective of generating capital appreciation by investing in equity and equity related securities as well as generating income by investing in debt and money market securities, while attempting to manage risk from the market through active asset allocation. In order to achieve this process, the scheme will follow a top-down and bottom-up strategy. The top-down process will lead to the active ongoing asset allocation decision between equity and debt and the bottom up process would lead to construction of the portfolio using specific securities.

The AMC has built a proprietary in-house quantitative model to determine the top-down dynamic asset allocation for the fund. The AMC has built a proprietary in-house quantitative approach to guide the asset allocation decision. The quantitative approach looks at equity markets across three parameters – momentum, volatility and valuations – to decide the appropriate allocation to the same. The allocation to debt is the residual number that is arrived at after deciding the equity allocation. The asset allocation decision is reviewed on an ongoing basis and is dynamically linked to movements in market variables.

**Explanation of the dynamic asset allocation process**

The AMC has built a proprietary in-house quantitative approach for dynamic asset allocation. The quantitative approach looks at equity markets across the following 3 parameters to decide the appropriate allocation to equity:

- 1) Valuation
- 2) Volatility
- 3) Trend

The allocation to debt is the residual number that is arrived at after deciding the equity allocation. The asset allocation decision is reviewed on an ongoing basis and is dynamically linked to movements in market variables.

**Specifics of the model**

- 1) Valuation is represented by the trailing PE of Nifty 50
- 2) Volatility is represented by the 30 day standard deviation of Nifty 50

**Hi** : > 17%

**Low** : <= 17%

- 3) Trend is represented by 2 variables – i) difference between the 90 day and 15 day moving average of the Nifty 50, and ii) rate of change of the 90 day moving average of the Nifty 50

Assume : R = rate of change of the 90 day moving average

15DMA = 15 day moving average of the Nifty 50

90DMA = 90 day moving average of the Nifty 50

**Hi** : 15DMA > 90DMA and R > 0%

**Mid** : 15DMA > 90DMA and R <= 0% OR 15DMA <= 90DMA and R > 1%

**Low** : 15DMA <= 90DMA and R <= 1%

The model is run on a 40 trading-day basis and all the parameters are considered for finalizing the equity allocation. Once the allocation is fixed, it is not changed for 40-trading days till the model is run again.

**Equity Allocations recommended by the model**

The gross equity exposure will be maintained between 65% to 100% while the net equity exposure is to be maintained between 30% to 100%. The difference between these exposure will be carried out using derivatives. The model has a matrix approach for considering the allocation across the different variables as follows:

Volatility	Trend	PE < 15	PE 15-18	PE 18-21	PE 21-24	PE > 24
Low	Hi	90-100%	90-100%	75-100%	50-75%	30-50%
	Mid	90-100%	65-85%	40-60%	30-35%	30-35%
	Low	50-85%	30-60%	30-35%	30-35%	30-35%
Hi	Hi	90-100%	75-100%	50-75%	30-50%	30-35%
	Mid	80-95%	55-70%	30-45%	30-35%	30-35%
	Low	50-75%	30-50%	30-35%	30-35%	30-35%

**Fixed Income Allocations recommended by the model**

The exposure to Debt & Money Market Instruments including cash & cash equivalent will be maintained between 0% to 35%. The model has a matrix approach for considering the allocation across the different variables as follows:

Volatility	Trend	PE < 15	PE 15-18	PE 18-21	PE 21-24	PE > 24
Low	Hi	0-10%	0-10%	0-25%	0-35%	0-35%
	Mid	0-10%	0-35%	0-35%	0-35%	0-35%
	Low	0-35%	0-35%	0-35%	0-35%	0-35%
Hi	Hi	0-10%	0-25%	0-35%	0-35%	0-35%
	Mid	0-20%	0-35%	0-35%	0-35%	0-35%
	Low	0-35%	0-35%	0-35%	0-35%	0-35%

Once the allocation has been decided, the equity and fixed income portfolios will be constructed on a bottom-up basis.

**Illustration with some of the possible scenarios is as given below:**

**Scenario 1:**

Assuming, Volatility is "Low", Trend is "Mid" and Trailing PE of Nifty 50 Index is in the range of 18-21, then as per our quantitative model (matrix given above), the net equity allocation comes out to be in the range of 40-60%.

The net exposure can be achieved with a combination of gross exposure and hedges. For example to achieve a 50% net exposure, the scheme can run a 70% exposure in gross equity while maintaining a 20% hedge. The extent of hedging and the instrument to be used is based on market conditions and cost of the hedge.

**Scenario 2:**

Assuming, Volatility is "Hi", Trend is "Hi" and Trailing PE of Nifty 50 Index is in the range of 15-18, then as per our quantitative model (matrix given above), the net equity allocation comes out to be in the range of 75-100%.

The higher net exposure can be achieved with a combination of gross exposure and hedges. For example to achieve a 75% net exposure, the scheme can run a 80% exposure in gross equity while maintaining a 5% hedge. Alternatively, the same can be achieved by maintaining 75% gross exposure and not having any hedges. The extent of hedging and the instrument to be used is based on market conditions and cost of the hedge.

**Equity and Equity Related Instruments:**

The equity allocation will be based on the outcome of the allocation model given above. Once, the allocation is fixed, then the focus would be to build a diversified portfolio of strong growth companies, reflecting our most attractive investment ideas, at all points of time. The portfolio will be built utilizing a bottom-up stock selection process, focusing on appreciation potential of individual stocks from a fundamental perspective. The AMC employs a "Fair value" based research process to analyse the appreciation potential of each stock in its universe (Fair value is a measure of the intrinsic worth of a company). The universe of stocks is carefully selected to include companies having a robust business models and enjoying sustainable competitive advantages as compared to their competitors. The Fund will have the flexibility to invest across the market capitalization spectrum. The Fund by utilizing a holistic risk management strategy will endeavor to manage risks associated with investing in equity markets.

The Fund has identified the following risks and designed risk management strategies, which are embedded in the investment process to manage these risks.

- i) Quality Risk - Risk of investing in unsustainable / weak companies.
- ii) Price Risk - Risk of overpaying for a company.
- iii) Liquidity Risk - High Impact cost of entry and exit.
- iv) Volatility Risk - Volatility in price due to company or portfolio specific factors.
- v) Event Risk - Price risk due to a company / sector specific or market event.

	<p><b>Fixed Income:</b> The Scheme proposes to invest in a diversified portfolio of high quality debt and money market instruments to generate regular income. The fund manager will allocate the assets of the scheme taking into consideration the prevailing interest rate scenario &amp; the liquidity of the different instruments. The portfolio duration and credit exposures will be decided based on a thorough research of the general macroeconomic condition, political and fiscal environment, systemic liquidity, inflationary expectations, corporate performance and other economic considerations. The fund manager will keep in mind the yield structure of different asset classes (e.g. the sovereign yield curve and the corporate bond yield curve) as well as the kinks within a particular yield curve ( e.g. the different points of the sovereign yield curve) while making investment decisions.</p> <p><b>Equity Derivatives:</b> The gross equity exposure will be maintained between 65% to 100% while the net equity exposure is to be maintained between 30% to 100%. The difference between these exposure will be carried out using derivatives and fixed income securities including money market instruments will be in the range of 0% to 35% The scheme will vary its investment in equity and equity related instruments depending upon the quantitative model.</p> <p><b>Cash-Futures Arbitrage:</b> The fund would look for market opportunities between the spot and the futures market. The cash futures arbitrage strategy can be employed when the price of the futures exceeds the price of the underlying stock. The fund would first buy the stocks in cash market and then sell in the futures market to lock the spread known as arbitrage return. Buying the stock in cash market and selling the futures results into a hedge where the fund have locked in a spread and is not affected by the price movement of cash market and futures market. The arbitrage position can be continued till expiry of the future contracts. The future contracts are settled based on the last half an hour's weighted average trade of the cash market. Thus there is a convergence between the cash market and the futures market on expiry. This convergence helps the fund to generate the arbitrage return locked in earlier. However, the position could even be closed earlier in case the price differential is realized before expiry or better opportunities are available in other stocks.</p>																																				
<p><b>Risk Profile of the Scheme</b></p>	<p>The scheme attempts to manage risk through active asset allocation. According to detailed historical analysis done by the AMC, such a scheme is able to generate a much lower risk profile compared to a 100% equity investment strategy. However there is no certainty that the active asset allocation approach will be able to deliver the risk management going forward. Please refer to the SID for further details.</p>																																				
<p><b>Risk Management</b></p>	<p>Risk management is going to be an integral part of the investment process. Effective risk management is critical to fund management for achieving financial soundness. Investments by the Scheme shall be made as per the investment objectives of the Scheme and provisions of the Regulations.</p>																																				
<p><b>Plans and Options</b></p>	<p><b>The Scheme offers the following Plans:</b> 1. Axis Dynamic Equity Fund - Regular Plan 2. CIR/MIRSD/2/2015 dated August 26, 2015 inter alia advising intermediaries to take necessary steps to ensure compliance with the requirements specified in the rules and guidelines specified by the Government of India. AMFI also issued its best practices guidelines circular no. 63/2015-16 dated September 18, 2015 on this matter. The AMC and the Mutual Fund are required to adhere to various requirements inter alia including submission of various information / details relating to the investors in the schemes of the mutual fund, to authorities, as specified under the applicable laws. Accordingly,

the following aspects need to be adhered to :

- For all new accounts opened by investors, from September 1, 2015 till October 31, 2015, MFs need to obtain relevant FATCA declarations. These details / certification need to be obtained by December 31, 2015, particularly in cases where, after Indicia search, a positive match is found with any US indicia. Further, in case self-certifications are not provided by unitholders till April 30, 2017, the folios would be blocked, which would mean that the AMC would prohibit the unitholder from effecting any transaction with respect to such folios. For pre-existing accounts (as on December 31, 2015 in case of CRS and June 30, 2014 in case of FATCA), specific investors above specified threshold limits would be required to provide self-certification forms.
